

# Team Coherence

## The easy way to SCM

### SPECIFICATIONS

#### Client Requirements

- o **Minimum:** 32 MB RAM, 12 MB Hard Disk Space

#### Server Requirements

- o **Minimum:** 64 MB RAM, 5 MB Hard Disk Space

#### Supported Environments

- o Microsoft Windows® 95 or later
- o Microsoft Windows NT® 4.0 with Service Pack 4 (SP4) or later.

#### Product Integration

- o Borland Delphi
- o Borland C++ Builder
- o ModelMaker
- o Visual Basic
- o Visual C++
- o Visual Studio
- o Visual Studio .NET
- o Visual Slick Edit
- o TOAD
- o Supports the SCC API

### Simplifying the Process of Change

Developing software is never easy. First, there is the challenge of managing multiple products, releases and versions across an evolving code base. The complexity is compounded when two or more developers work on the same code in parallel. Plus it is now common that these developers are geographically distributed and not across the hall from one another.

#### This is where Team Coherence comes in:

- o **Powerful Version Control.** Team Coherence tracks changes to files of any type, maintaining complete, annotated version histories of source code, binaries, executables, documentation, libraries, and web artefacts. Team Coherence also understands that certain files (eg dfm/pas) can be logically grouped as single entities.
- o **Flexible Workspace Management.** Team Coherence Views provide developers with the exact versions of files to complete a particular task. Views also make maintenance of older versions of projects far easier.
- o **Promotional Modelling.** With Team Coherence you can model your development process and force all projects to follow that model. At each development stage you can specify who is allowed to promote files to the next stage, and who is allowed access to a particular level.
- o **Make Parallel Development Practical.** In today's competitive market, parallel development is a necessity for many software development teams. Team Coherence fully supports both the parallel and serial development models.
- o **Track Bugs and Issues.** Tight integration of issue tracking into Team Coherence Enterprise allows you to assign files to existing and new issues during the check-out process and to track the progress of Issues. TC Tracker is also available as a standalone tool and as an addin to the other editions to Team Coherence.
- o **Collaborate Across the Globe.** Team Coherence was built from the ground-up to support remote development. Whether using a LAN, WAN, the Internet or dial-up connection, performance is maximised through multi-level caching and minimisation of the data transferred between clients and the server.
